

AIR CHINA EXPANDS BEIJING-NEW YORK FOOTPRINT, ADDING FLIGHTS TO NEWARK AIRPORT

News / Airlines, Airports / Routes

In order to further meet the buoyant demand for air travel between China and the United States, Air China will add more flights to its Beijing-New York schedule from October 26, 2015. The newly-added flights will serve Newark Liberty International Airport, offering an additional easy travel option for travelers between the two regions.

Newark Liberty International Airport is one of the five biggest international airports in the United States and ranks among the three main airports of New York alongside JFK Airport and La Guardia Airport. The flights to be added will make Air China the only Chinese carrier serving Newark Airport. Up to now, Air China has been operating two daily flights from Beijing Capital International Airport to JFK Airport.

According to Air China, the carrier has made the decision to serve Newark because of the airport's well-developed transportation network and ideal geographical location. The flights to be added will not only offer an additional travel option for passengers destined for New York, but also make it much easier for passengers to fly from Beijing to Newark and then make flight connections to other US cities. What's more, AirTrain Newark, a monorail people mover system, can get passengers from any of Newark Airport's terminals to the train station within just minutes, where passengers

can hop onto the train to Manhattan 16 miles away. It's just a 30-minute drive from the airport to the Pennsylvania Station in downtown Manhattan. For travelers who want to tour the former site of the World Trade Center, the Statue of Liberty, the Wall Street and Princeton University and those who are ready to have a shopping spree at Woodbury's Outlets, flying to Newark Liberty International Airport is a wise decision to make, granted.

In 2015, Air China has been cementing its global route network with its hub in Beijing and expanding its footprint in the Americas. Air China put Boeing 747-8, a new member of the Boeing 747 family, into service on its Beijing-New York route at the beginning of the year, increased its Beijing-Los Angeles service to three daily flights in May and will start the Beijing-Montreal service in September. The forthcoming additional flights to New York will further enhance Air China's presence in the Americas. Currently, Air China serves 8 destinations in North America, including New York, Washington D.C., Los Angeles, San Francisco, Houston, Vancouver, Montreal and Hawaii, offering over 140 flights per week operated with Boeing 777-300ER and Boeing 747-8. In addition, Air China also offers healthy seasonal in-flight meals and VIP chauffeured transfers between the airport and downtown for passengers on the China-US flights. Comfortable cabin environment and attentive services guarantee passengers a truly pleasant travel experience.

About the flights

The flights CA819/820 Beijing-New York (Newark Airport) are operated four times a week on Monday, Tuesday, Thursday and Saturday. The outbound flight departs from Beijing Capital International Airport at 09:35 Beijing time and arrives in Newark Airport at 11:05 local time.
