BOMBARDIER CELEBRATED VISTA FIRST GLOBAL 8000 AIRCRAFT

News / Business aviation, Manufacturer

Bombardier celebrated Vista, a longtime Bombardier customer, taking possession of its first Global 8000aircraft at the company's London Biggin Hill Service Centre. With this addition, Vista customers will soon be treated to the finest experience in business aviation today. This introduction marks the beginning of upgrades to Vista's current Global 7500 aircraft, with two per month planned — leading to the full fleet of 18 being operational as Global 8000 jets by year end and in turn marking the largest subscription fleet available of this revolutionary jet.

Boasting a range of 8,000 NM and a top speed of Mach 0.95, the Bombardier Global 8000 aircraft will enable Vista customers to reach their destinations faster and in greater comfort than ever before. With the longest seated length in its class and signature cabin features such as the lowest cabin altitude in business aviation production, passengers will experience extreme comfort throughout their journey, arriving at their destinations rested, refreshed and ready to perform.

Eric Martel, President and CEO, Bombardier commented: "The Global 8000 stands apart as a truly no compromise aircraft, delivering unmatched speed, exceptional comfort and industry-leading

field performance. With the addition of the Global 8000 to its fleet, Vista will offer its customers the best of what is possible in the industry."

Thomas Flohr, Founder and Chairman of Vista stated: "These developments mark another important milestone in Vista's ongoing commitment to operating the most advanced fleet in private aviation. For our Members, greater speed and extended range translate directly into practical benefits such as reaching their destination faster or travelling more efficiently with direct flights. With more Members flying further and more frequently, these capabilities allow us to offer greater flexibility while maintaining the consistency and service that sets Vista apart."

The taking of possession by Vista of its first Global 8000 aircraft follows closely on the heels of a major announcement between the two companies. On February 11, 2026, Vista and its commonly controlled entities announced a firm order for 40 Challenger 3500 business aircraft, with purchase options for an additional 120 aircraft, further solidifying the special bond between the two companies.
