ABLE AEROSPACE SERVICES ANNOUNCES BELL 429 CR&O CAPABILITIES

News / Business aviation, Maintenance / Trainings, Manufacturer

Able Aerospace Services has announced the addition of repair and overhaul services for the Bell 429, a helicopter with features that support the mission of Emergency Medical Services (EMS) and related public service operators.

“We pride ourselves on working at the speed of the customer, and that requires our team to remain at the front of helicopter technology,” said Able Aerospace Services General Manager Gabriel Massey. “The addition of Bell 429 CR&O capabilities is an example of that commitment. It’s something we are excited to roll out to a market of modernday aircraft owners.”

Able’s new capabilities include the repair and overhaul of all Bell 429 higher assemblies, inclusive of transmission, main rotor hub and tail rotor gearbox. The company will continue to expand its Bell 429 offerings as demand for aftermarket support grows.

As a Bell Certified Service Center, Able offers more than 10,000 FAA-approved repairs and overhauls, a massive rotable exchange inventory, and extensive on-site specialized services that allow the company to complete 98 percent of all jobs on site.

“The objective for our new Bell 429 capabilities is the same that we’ve had across our history – which is to provide smart solutions that help operators of all types to affordably maintain their
