ELIXIR AIRCRAFT SIGNS A PARTNERSHIP WITH SKYZEN FOR FLEET MANAGEMENT

News / Manufacturer

Elixir Aircraft and Skyzen, a French SaaS solution specialized in airworthiness and aircraft maintenance management, announce the signing of a strategic partnership. This collaboration aims to ensure a smoother entry into service for the aircraft and to simplify maintenance and airworthiness management—part of Elixir Aircraft's commitment to providing a one-stop-shop solution for operators.

Skyzen is an online SaaS platform that centralizes all technical data related to an aircraft and automates airworthiness and maintenance management. It notably facilitates the management of flight hours, regulatory deadlines, maintenance programs, and technical documentation. It provides a real-time view of fleet status, improves operational traceability, and reduces the risk of errors, while simplifying interactions between operators, maintenance organizations, and authorities. Elixir Aircraft has been using the solution to manage its own fleet of demonstration aircraft since October 2024.

A joint initiative offering six months of Skyzen to support operators from delivery

The partnership between Elixir Aircraft and Skyzen reflects a shared commitment to facilitating the entry into service of an Elixir and supporting operators with digital tools that meet regulatory and operational requirements. Under this agreement, each delivered Elixir will benefit from complimentary access to Skyzen for a period of six months. This initiative allows operators to experience the solution in their operational environment from day one and to assess the benefits of digitizing their processes.

Marc Douton, Director of Customer Support at Elixir Aircraft commented: “The integration of Skyzen from the delivery of an Elixir addresses a very concrete need for our customers: having an immediately available, reliable, and compliant tool to manage airworthiness and maintenance. It helps secure operations from the very first flight hours and simplifies the aircraft entry into service.”

Jean-Christophe Abrial, President of Skyzen stated: “We are very pleased with this partnership with Elixir Aircraft. Providing customers with access to Skyzen from the moment the aircraft is delivered not only simplifies maintenance and airworthiness management, but also helps establish reliable and traceable data from the outset. This is a key lever to support daily operations and contribute to preserving the long-term value of the aircraft.”

A one-stop-shop approach to support operators from delivery to operations

As part of its one-stop-shop strategy, Elixir Aircraft offers a comprehensive value proposition that goes beyond aircraft delivery. The company supports operators at every stage, from entry into service to day-to-day operations, by integrating solutions tailored to their operational needs. This partnership with Skyzen further strengthens this approach, complementing existing collaborations with AviatorPro and Alsim for both theoretical and practical training. Together, these partnerships provide operators with a fully integrated ecosystem, designed to simplify fleet management and enhance the overall user experience.
