

WORLD MOST ADVANCED DRONE CHARGING STATION - H3 DYNAMICS LAUNCHES DBX-G7

News / Business aviation, Manufacturer

[H3 Dynamics](#) announces the launch of DBX-G7, a brand new vertiport system for autonomous drone operations. Smarter, faster, and multi-modal with 5G and 4G, DBX was designed to scale on-going digitization efforts in safety compliance, maintenance and crisis management. Applications range from smart cities across Asia to various types of industrial sites worldwide.

Developed during the COVID-19 pandemic, DBX-G7 is a direct response to the new tele-presence and remote work paradigm. DBX performs all the functions of an on-site drone pilot: navigation, docking, stowing, battery charging, data retrieval, transmission, and cloud-based processing. Autonomous systems such as DBX help reduce the need for on-site presence, and can help alleviate rising labor shortage pressures.

"With accelerating digitization, the need for structural scans is also growing while pilot availability is limited. We are looking to close the gap with our DBX autonomous drone stations." Says Samuel Chauffaille, head of H3 Dynamics' robotics systems division.

H3 Dynamics has been deploying its AI-enabled digital inspection solutions to address the many thousands of high-rise buildings that require regular inspections in Singapore, most of which use using piloted drone operations. The company has expanded its solution through strategic partnerships, including on a SAP connectivity to send repair work orders directly from H3 Dynamics' digital platform. Enterprise software giant SAP and H3 Dynamics are now working together on an increasing number of industrial use cases.

Through its global partnership with air traffic control leader THALES, H3 Dynamics is working on real time airspace integration through a multi-pronged approach around the world. DBX is the start of autonomous urban air mobility - one that builds immediate commercial experience with lower risk, 5-kg drones operations, a living laboratory for cities considering 4-5-ton air taxis designed to carry passengers

"What makes DBX really unique, is its open-architecture philosophy. Unlike other closed environments that restrict users to a single drone type – DBX can host professional drones from different manufacturers, and support multiple communication protocols and operating standards." – says Taras Wankewycz, H3 Dynamics' Founder and CEO.

This enables a broad universe of existing use cases and client requirements across geographies—from solar farms to precision agriculture, critical infrastructure maintenance, utilities, buildings, perimeter security, and many more.

"DBX will accelerate the global drone economy and existing solution developers anywhere in the world. Just like with smartphones help deploy the mobile app economy, H3 Dynamics' DBX will deploy the global drone analytics economy".
